

Biologic Analog Science Associated with Lava Terrains

Join Dr. Darlene Lim, NASA Ames Research Center geobiologist and Principal Investigator of BASALT for an exciting glimpse into how NASA will be conducting Human Missions and science on the surface of Mars. Dr. Lim will highlight the simulations being performed at the Hawaii Volcanoes National Park landscape as an analog research platform to early Mars when volcanism and water were common.

Thursday November 3, 6pm
Science & Technology Bldg. 108
University of Hawai'i at Hilo
